PERFORMANCE DAYS®

Fabrics, Accessories, Plus A Unique Program – Everything Product Managers & Designers Need

PERFORMANCE DAYS® – functional fabric fair is the place to find high performance functional fabrics and accessories. The fair is scheduled to coincide with the seasonal sourcing schedule – so the Kickoffs for the summer/winter collections which enables decision makers like designers, product- and purchasing managers from almost all well-known international brands to select their materials at exactly the right times. Every April/ May and November, the fair offers the entire functional range of products – from yarns to fabrics, finishes, and accessories.

Both, the visitors and the exhibitors appreciate the relaxed and focused working atmosphere at PERFORMANCE DAYS®. Innovative products are on display on two floors and in seven halls, more than 180 exhibitors from about 20 nations participate. In addition to the extraordinary free program consisting of more than 70 guided tours, workshops, and presentations, the PERFORMANCE FORUM is the core of the

Accessories And Textile Manufacturers Available 24/7 For The Sports- And Outdoor Apparel

To have all that not just available twice a year during two fair days, PERFORMANCE DAYS® has made its information and tools available online at "24/7 SOURCING" throughout the year. The entire PERFORMANCE FORUM items since November 2012 covering all parts of the layering system, from baselayer to 3layer, from pants to lightweight, plus accessories are digitalized. Buyers can search for potential suppliers and products in a database of over 2,700 fabrics and accessories. Technical data sheets, photos, compositions, and information about the individual suppliers, in addition to the possibility to submit a "sample

request" or an "appointment request" promote work efficiency! Also on the website is the "PERFORMANCE COLORS by Nora Kühner", the season's first color forecast and the stories behind it. To top it all off, all (ECO) PERFORMANCE AWARD winners and 100% Jury Likes and PDF files of all presentations can also be read online. Plus, the newer ones are even provided as an audio file in the PERFORMANCE ARCHIVE. The latest added-value is provided by the Focus Topic program. Flyers, presentations, and product samples provide comprehensive information.

The Focus Topic: Inspiring Impulses For Tomorrow

It all began in April 2015 with "Wool – A Responsible Approach". The first Focus Topic explained all the do's and don'ts of the highly functional natural fiber. It provided a guide through the maze of certificates. Next came "Athleisure - Rethinking Performance Knits" revealing the boundaries between sports-, casualwear and fashion are no longer so clearly defined. Natural and synthetic fiber blends were placed under the microscope to classify fabrics according to fiber size, length, strength, structure, thermal efficiency, hand feel, laundering effect, etc. Advantages and disadvantages of blends and constructions were listed. A sustainability Focus Topic was "Recycled? Challenges & Opportunities" presenting facts and figures and explaining the concepts behind post-industrial and post-consumer

recycling. In November 2016, all the talk was about hybrids so the topic was "Hybrids - Engineered Through All Layers" and the differences between hybrid yarns, fabrics, and clothing were pointed out. The topic explored the questions: What functional properties are demanded and how are they evaluated? What role does intelligent clothing physiology play and what happens when the body overheats? The most recent focus topic looked at options that protect soil, air, and water from the tons of waste and toxic components. "Biodegradable – Back to Nature" showed that recycling is just one approach to minimize waste. Materials are already available that decompose or biodegrade in soil, landfills, or marine waters.
